

BB complete

THE ALL-IN-ONE INSTALLATION SYSTEM

USER GUIDE

JOINTING

Preparation

Ensure all surfaces are clean, dry and completely free of dust.
Well cut joints which fit tightly will ensure an inconspicuous finish.
Biscuits will ensure strong level joints and always use connector bolts to assure strength.
Cut bolt slots no deeper than 25mm from the rear surface for 40mm worktops.

Assembly

The full range of BB Complete is available as a standard 290ml (C90) cartridge to fit any standard caulking/sealant gun. The product is also available in 6 decors in a 80ml cartridge enough to do 3 joints.
The cartridge includes one screw on nozzle with screw cap closure to enable storage and re-use.
BB Complete has a joint open time of 10-15 minutes allowing more time to make adjustments.
Apply a 5mm diameter bead around the border of one cut edge, 5mm in from the bottom and top faces following the profile and completing a loop.
An additional centre bead is needed for 60mm worktops. Insert the connector bolts and tighten to the nip point, ensuring that BB Complete squeezes out around the entire joint.
Check the joint is level, adjusting as necessary using a rubber mallet.
Fully tighten the bolts a maximum of two full turns past the nip point.
Using a soft plastic or laminate scraper, remove excess adhesive avoiding smears. Take care not to scratch the surface particularly with gloss finish worktops.

Moisten a clean, lint-free cloth with white spirit and carefully remove residue, wiping at 90° across the joint to avoid removing adhesive before the joint cures.

Do not wipe down with water or any other solvents and allow 24 hours for the joint to fully cure before using.

SEALING

For all areas where raw chipboard has been exposed, such as sink cut-outs and cut ends, spread a bead of BB Complete using a spatula ensuring total coverage.
To seal a worktop to a wall ensure all surfaces are fully dry, dust free and stable.
Apply a generous bead of BB Complete along the back edge of the worksurface ensuring there are no gaps.

Smooth the bead using a spatula or use a rubber gloved finger dipped in white spirit.

Allow to cure for 24 hours before use.

BONDING

Upstands

Ensure that all surfaces are fully dry, dust free and stable before bonding.
Apply three beads along the length of the upstand and a generous seating bead along the bottom raw chipboard sufficient to ensure the upstand is totally sealed against moisture ingress.

Clean away any excess with a clean wipe moistened with white spirit.

Do not use water or other solvents. See "finishing" instructions to add a final waterproof seal between the upstand and worktop.

Allow to cure for 24 hours before use.

Splashbacks

Ensure that all surfaces are fully dry, dust free and stable before bonding.
Dot and dab BB Complete to the back of the splashback and apply a generous seating bead along the bottom raw MDF, sufficient to ensure the splashback is totally sealed against moisture ingress.

Clean away any excess with a clean wipe moistened with white spirit.

Do not use water or other solvents. See "finishing" instructions to add a final water proof seal between the splashback and worktop.

Allow to cure for 24 hours before use.

FINISHING

The standard nozzle is designed to produce a fine bead. Consider masking the area to be finished with a good quality masking tape to produce a neat straight edge.

Hold the nozzle at a 45° angle and apply an even bead along the area to be finished.

Shaping of the bead is possible using a specialist smoothing tool, soft scraper, spatula or simply using a rubber gloved finger dipped in white spirit. Do not use water or other solvents.

Once satisfied with the final finish any masking tape should be peeled away immediately.

Clean away any spillage with a clean wipe moistened with white spirit. Do not use water or other solvents.

Allow to cure for 24 hours before use.

The professional method of jointing, sealing, bonding and finishing all from one tube.

Also available in 80ml tube (does three joints).

*A neutral coloured adhesive for use in fixing panels where colour matching is not required is available in the 290ml cartridge at a lower price point.

SAVE TIME AND MONEY WITH BB COMPLETE

Eliminating the use of coloured fillers, sealants and glue products, BB Complete is a **one tube installation solution** designed for **jointing, sealing, bonding and finishing** laminate components, saving you time and money.

BB Complete is an easy to apply, professional jointing method for Butt & Scribe Joints, hob and sink cut outs as well as bonding and finishing splashbacks and upstands; and you can colour match to over 150 of Plasman's worktop designs. **(Please refer to the colour matrix)**

BB SAFE NOT SORRY!

Providing a firm yet flexible fix that will not crack over time, BB Complete reduces the risk of moisture penetration and blown worktop joints.

- All-in-one adhesive
- No need for silicone or separate fillers
- 23 Colourways (290ml tube)
- 6 Colourways (80ml tube)
- Excellent gap fill
- UV Stable
- Waterproof with flexible finish and no shrinkage
- No smell, no fumes
- Non toxic
- Easy to work, with 10-15 minutes open time
- Excellent bond strength
- Tested by FIRA
- 3 year joint warranty when used with Prima worksurfaces

*BB Complete bonding and sealing

A neutral coloured adhesive for use in fixing panels where colour matching is not required is available at a lower price point.

Co-ordinate and blend with the whole Nuance collection.

BB Complete is not for use with solid surface where a hard joint is required. Our colour matched solid surface adhesive should be ordered along with the special installation kit.

Please remember our 15 year warranty requires the use of these adhesives, so ensure they form part of your order.
