

BRINGING BEAUTY TO THE SURFACE

With its deeper 25mm surface and inconspicuous seams, Mistral radiates a stunning crystal ambience, unparalleled in modular solid surfacing.

Already proven in high wear commercial and laboratory environments, Mistral offers superior durability and versatility, allowing more freedom in designing your kitchen environment. Custom shaping, curvatures and sink cut outs for undermounts are all achievable on-site without edging procedures, which makes Mistral quick and simple to install.

Mistral is a stable, self supporting solid surface which requires no substrate, therefore avoiding any special sealing or protection measures at joints or sink cut outs. This eliminates the risk of blown joints due to moisture ingress or bacterial build up in core materials. Joint strength is amplified through its thicker 25mm acrylic structure and with a silky pre-finished surface, installation time reduced.

Chic, hygienic and practical, Mistral is the pinnacle in luxury surfacing. Mistral's denser acrylic composition offers advanced protection against impact, everyday wear and tear and staining.

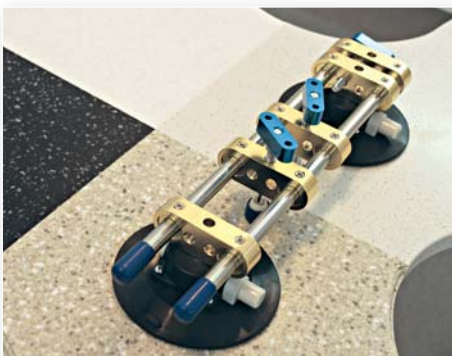

Mist Island unit

BE ELABORATE

Make the most of your kitchen work space with sweeping curves and larger island units. Mistral's on-site workability allows total flexibility.

The only limitation is your imagination.

Use a Mistral seaming tool for accurate jointing and optimum tightness.

25MM SOLID SURFACING SLAB

Tongaro worksurface with 1810 Etrodo undermount sink

PRECISION & PERFORMANCE

Through its robust 25mm structure, additional strength and performance is gained at sink and hob cut outs. Deeper precision drainer grooves can be applied enhancing the quality of finish and aesthetic appeal.

Tongaro worksurface with radius corner

SHAPING UP

Mistral can be shaped on-site to master door contours or tight radius corners. Its leading edge can be profiled to your chosen design.

Strata worksurface with double Belfast sink

A 'NO-WORRY' SINK SOLUTION

Mistral accommodates any undermount sink installation in both kitchen and bathroom environments.

Compared to natural stone, Mistral is completely non-porous, chemical resistant and will not stain; the perfect solution for busy "wet area" applications including Belfast and undermount sinks, vanity units and vulnerable areas around dishwashers, where cleanliness and hygiene is so important.

Because Mistral is a man-made acrylic material, it has no natural porosity, cracking or pitting defects which can inhibit performance. Contemporary, yet classical, Mistral's homogenous surface has a beautiful transparency and depth with the advantage of no visible joints, creating a "honed from solid" aesthetic.

A major benefit of Mistral is that extreme wear and tear can be re-sanded and polished out in-situ, bringing the surface back to its original best at any time during the lifespan of the kitchen.

Light scratches or reduction in surface lustre levels in high usage areas can be taken care of with a consumer care kit.

Please note that darker colours will highlight scuffs or scratches more visibly than lighter colours which are consequently more practical and require little maintenance.

Please go to page 46-47 for more information on solid surfacing.

Availability

10 YEAR GUARANTEE AGAINST MANUFACTURING DEFECTS

<p>Worksurfaces* 3010 x 625 x 25mm square-edged all the way round with a linear 400 grit surface finish</p>	<p>Breakfast Bar* 2000 x 900 x 25mm</p>	<p>Sheet* 2000 x 900 x 12mm</p>	<p>Upstand* 3010 x 100 x 12mm</p>
